ÇALIŞMASI / OPERATION

Sert çelik kaplı kısmında sıkı bir nokta bulunan denge valfleri kaviteasyonu önlemek içindir. Ayrıca ısı koruması vardır. Herhangi bir sorun olduğunda ya da bozulmada pompadan gelen yükü tutar.

Are overcenter valves with one tight poent on harened steel and are used to prevent cavitation, keeping a load from running ahead of the pump. They provide thermal relief protection and locking the load in cases of hydraulic line breakage or in the event of accidental operation of the directional control valve when the pump is turned off.

NOT / NOTE:

Valfler çalışma basıncından 1.3 kat daha düşük basınca ayarlanmalıdır.

Valve should be set at 1.3 times load induced pressure.

Max Çalışma Basıncı: $\frac{350 \text{ bar}}{1.3} = 270 \text{ bar}$
