High pressure filters

In order to constantly improve our products quality, we take the right to make changes to the catalogues at any time without notice. Customers have the responsibility to continuously check all the information in the catalogues. This catalogue cancels and replaces the previous ones.

HIGH PRESSURE FILTERS HMM SERIES 42.000.000 Pa (420 BAR) Tappo

HPM is the high pressure filter up to 42.000.000 Pa (420 bar-6000 Psi); the range is composed by 3 different sizes with nominal flow rates up to 400 l/min., available with threaded or flanged connections. Filter elements are made with the most advanced materials, as a guarantee for an high filtration efficiency and a long-lasting life. HPM series modular construction allows the customer to choose the most suitable type following his needs. OMT Research & Development Department is constantly making a check about filter and elements performances.

Pressure Drops (according to ISO 3968)

The pressure drop of the complete filter is calculated by adding the pressure drop of the housing to that of the filter element. Pressure drops in the housings. The graphics refer to use of mineral oil with a mass density of 860 Kg/m. The pressure drop is proportional to the variations of mass density. Pressure drops in the filter elements. The graphics refer to mineral oil with a kinematic viscosity of 30 cSt. The variation of the pressure drop is proportional to viscosity.
